esper

Next-Gen Device Management

Advanced capabilities, streamlined operations

When your business relies on devices, everything needs to just work. Rudimentary device management slows growth and stunts your ability to scale quickly, so a reliable infrastructure built on automation and ease of use is crucial.

The Esper platform enables you to deploy, monitor, manage, and update your devices with confidence — Android (GMS or AOSP), iOS, or a mixed fleet — from a single pane of glass.

Device management capabilities for the entire device lifecycle

Gain total control over how you configure, deploy, manage, monitor, and update your devices.

Deliver breakage-free rollouts
- App update pipelines
- Bulk actions
- Content & app management

Stay on top of fleet health
- Remote control & debug
- Alerts
- Telemetry & reports

Reliably set and enforce policies

nextbite

Traditional MDMs are only built for employee device use, but we also needed a solution or the devices we're sending to our customers — for the devices they depend on to operate their businesses every single day.
