

ApexTech provides custom software development services to businesses across the healthcare industry. Our healthcare development services have been designed to specifically enable automation of routine tasks, speed up the digitalization of the medical institutions, and enhance IT healthcare estate. Our team builds comprehensive IT solutions allowing hospitals, pharmaceutical companies, and nursing homes to streamline medical care delivery, improve patient experience, and gain a holistic view of the healthcare IT ecosystem.

LONG-RUN PARTNERSHIP

ApexTech offers a long-term partnership determined by a coherent and accurate development life cycle and a dedicated team that supports customers across all development stages, from idea to maintenance and scalability.

CUSTOMIZATION

ApexTech provides specific healthcare solutions for various needs like optimizing manual work, facilitating communication between caregivers and patients, or cutting extra expenses. Get a customizable software approach, developed for your existing framework or from scratch.

INNOVATION FOREFRONT

ApexTech builds IT solutions using the latest architectures and frameworks for healthcare projects, including IoT, containerization, serverless, microservices, etc. Our solutions are based on the industry's best practices, including corporate requirements and regulations.

APEXTECH HEALTHCARE SERVICE BENEFITS:

Enhance patient engagement. Provide your patients with transparency and instant responses to their problems that occur. Speed up and simplify internal workflows, communication with patients, and operations across all medical departments. As a result, get higher performance, accuracy of medical procedures, and guarantee high-quality service to boost client satisfaction.

Improving the accuracy of treatment. Gain valuable insights into patients' treatment, share data with your colleagues, avoid manual tasks and possible human mistakes. Automate treatment procedures with healthtech software, adjusted and modified to suit your preferences and needs.

Improving data security. Facilitate and streamline analyzing, validating, and storing patients' data within your organization by using a software approach that is based on the high-grade security checklist and international regulations.

Bringing in external expertise. There is no need to spend essential resources on reprofiling IT human resources and hiring processes, take additional responsibilities, and increase internal workloads.

Save on finance and time. Optimization of technology and resource spending using professional outsourcing services delivered within strict SLAs.

APEXTECH FLOW OVERVIEW:

DISCOVERY

The Discovery step allows ApexTech to dive deeper into customers' needs and requests. The current stage is essential for requirements setting, competitor analysis, digital capabilities, etc. Main phases:

- Research
- Concept
- Plan

BUILD

The Build step consists of the design & development processes, reviews, software testing, and adjustments.

ApexTech specialists can cooperate with the customer's tech or non-tech team as well as run the project by themselves.

DEPLOY

The Deploy step consists of a deployment plan creation, scheduling, and monitoring of the software production environment. All updates and patches are included.
