

The Content Services Platform Checklist

If you're considering an Enterprise Content Management (ECM) replacement to a full-featured, flexible Content Services Platform that adapts to your needs — you're not alone. But choosing the right software can be a daunting mission.

We've created a quick checklist that you can use to understand a vendor's ability to meet modern requirements with their platform offering.

Core Capabilities

Can the platform manage...

- Documents and data
- Video content
- 3D files
- Internet of Things (IoT) data

Does the platform support...

- Large-scale bulk ingestion
- Global access to information
- Basic and advanced search in <50 ms
- Complex/non-hierarchical information taxonomies

Flexibility

Is the platform flexible enough to...

- Allow different core systems to "talk to" each other
- Allow users to keep working with the tools they prefer
- Integrate seamlessly with a wide range of services and apps
- Run in the cloud environment you prefer
- Scale aggressively without performance impacts
- Continuously improve instead of requiring expensive upgrades

Advanced Capabilities

Does your platform offer...

- Business-specific artificial intelligence (AI) and machine learning (ML)
- Open architecture to allow quick, easy integrations
- A low-code development tool to deploy apps faster
- Advanced capabilities for information governance
- A forward-thinking vision for the future of information

→ If the platform you're considering doesn't tick all the boxes — we're here to show you a better way forward.

About Nuxeo

Nuxeo partners with the world's largest organizations to accelerate digital transformation, reduce costs, increase productivity, and deliver superior customer experiences. The Nuxeo Platform is a modern content services platform for low-code application development with a scalable architecture and flexible metadata model that provides advanced content management capabilities, including AI and machine learning, for any type of content. Regardless of size, volume, or where your content is stored, we enable organizations to securely access, find and use information across business units, application.
