

Self-service automation Vs. Document automation proper.

What's the difference?

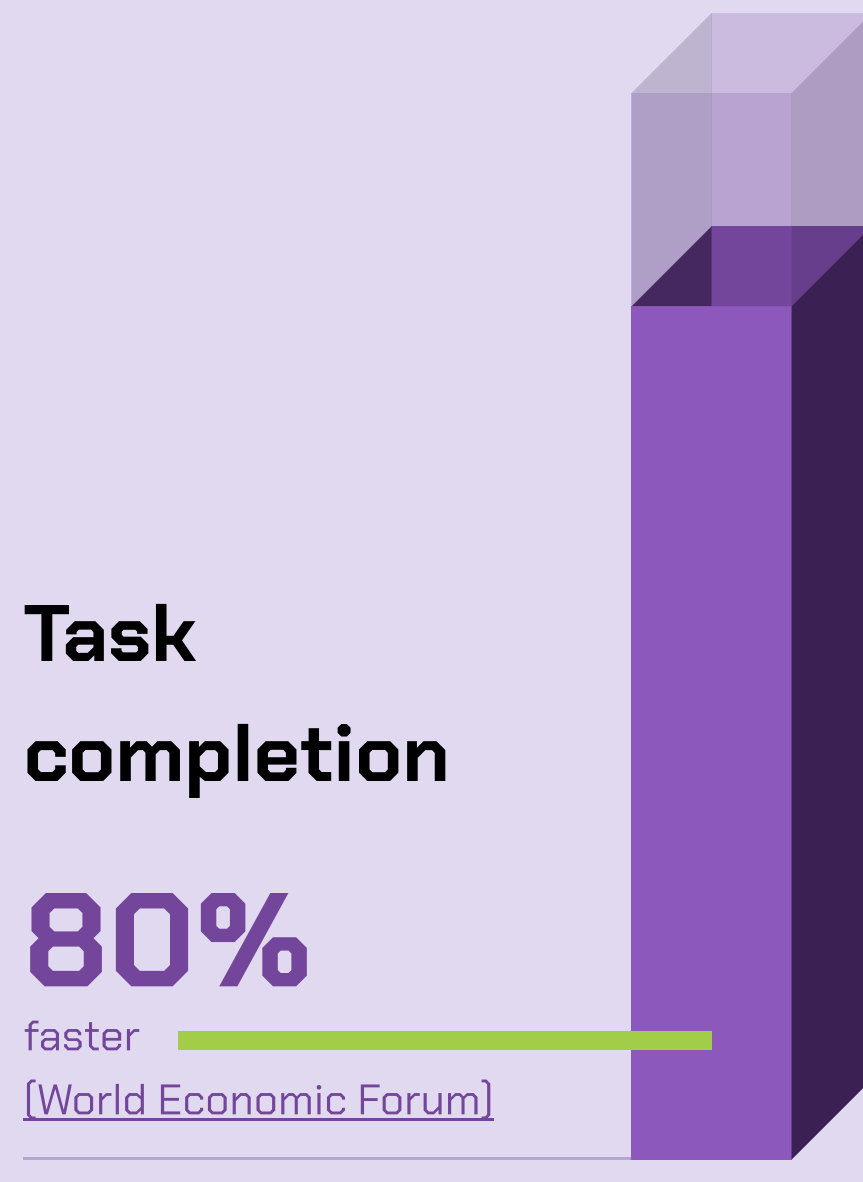

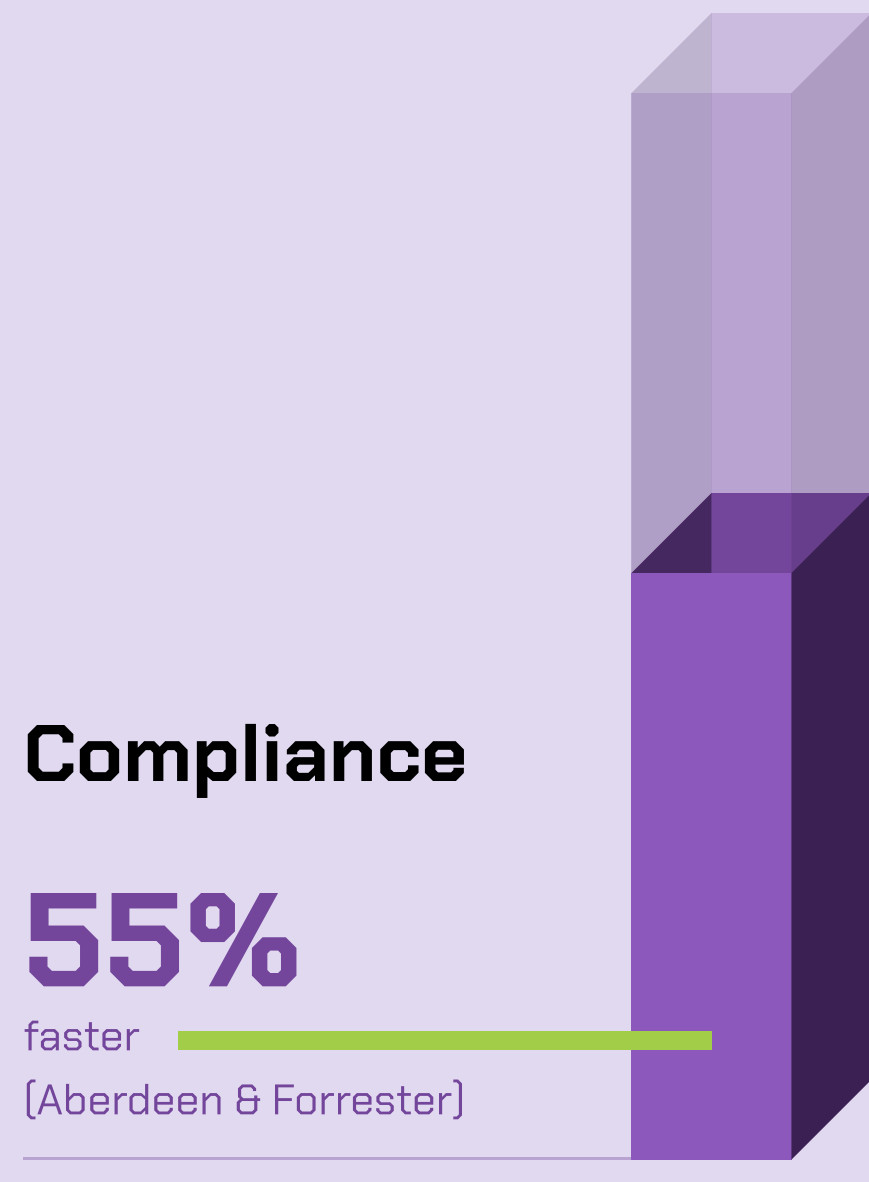

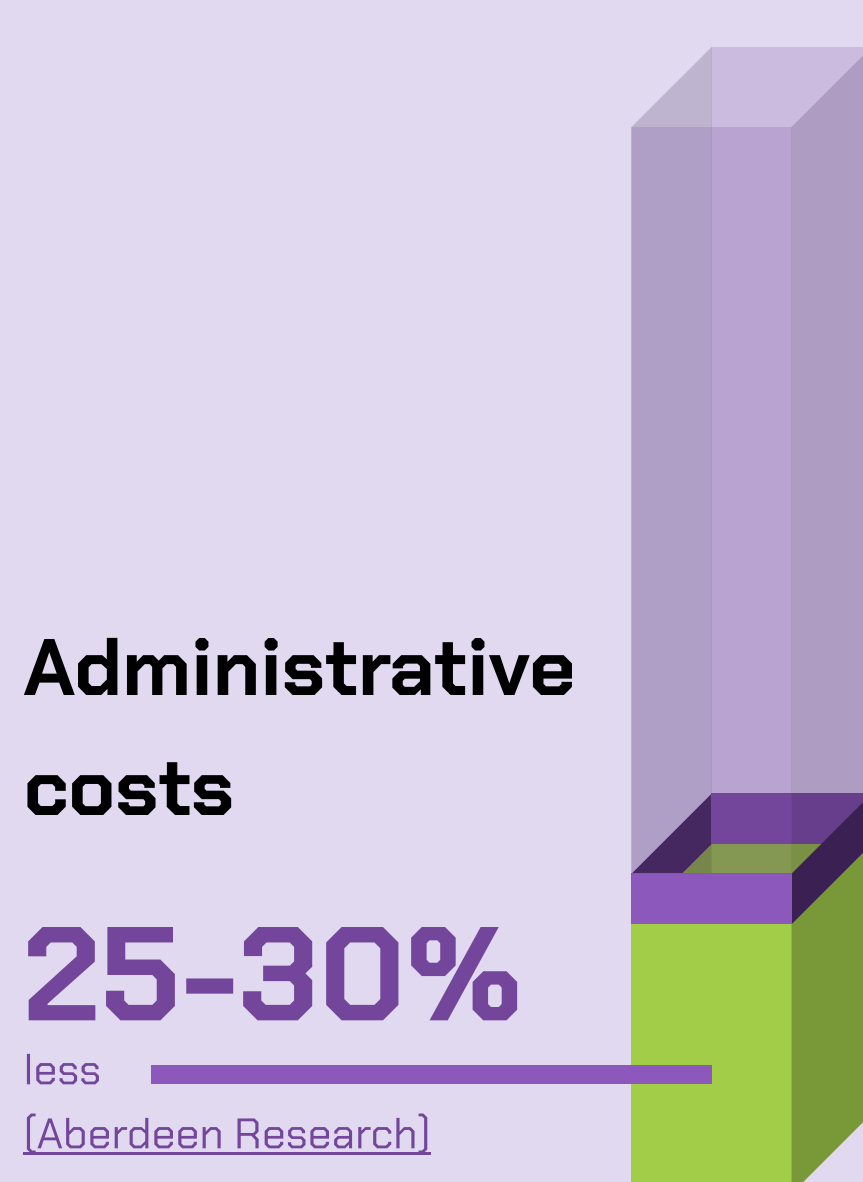

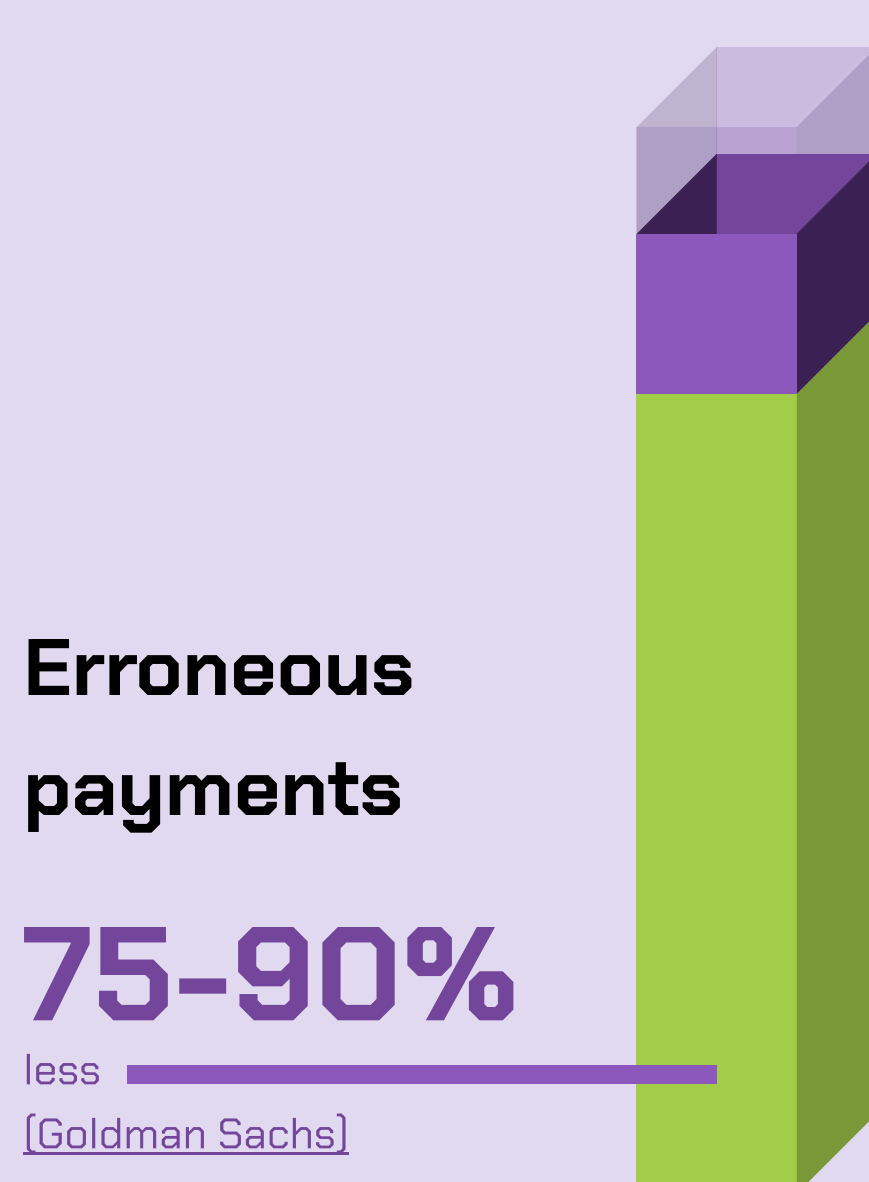

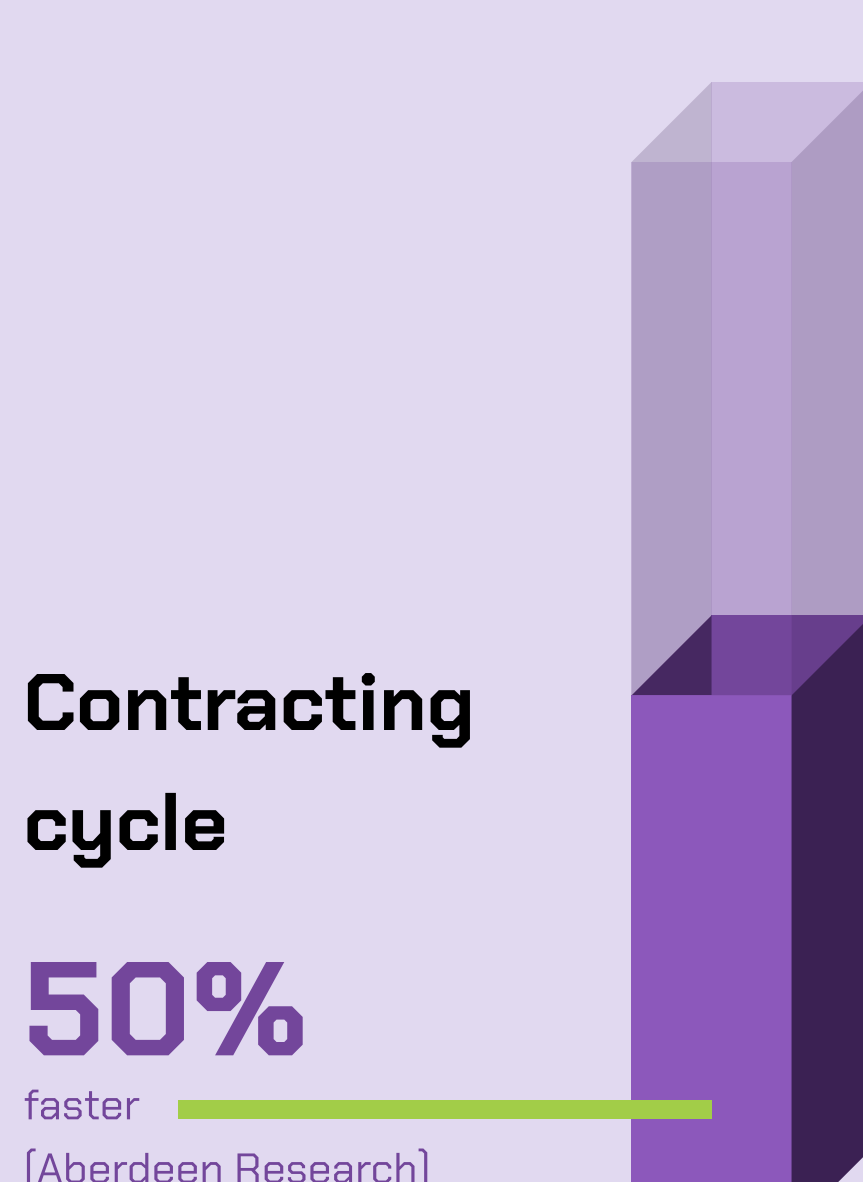

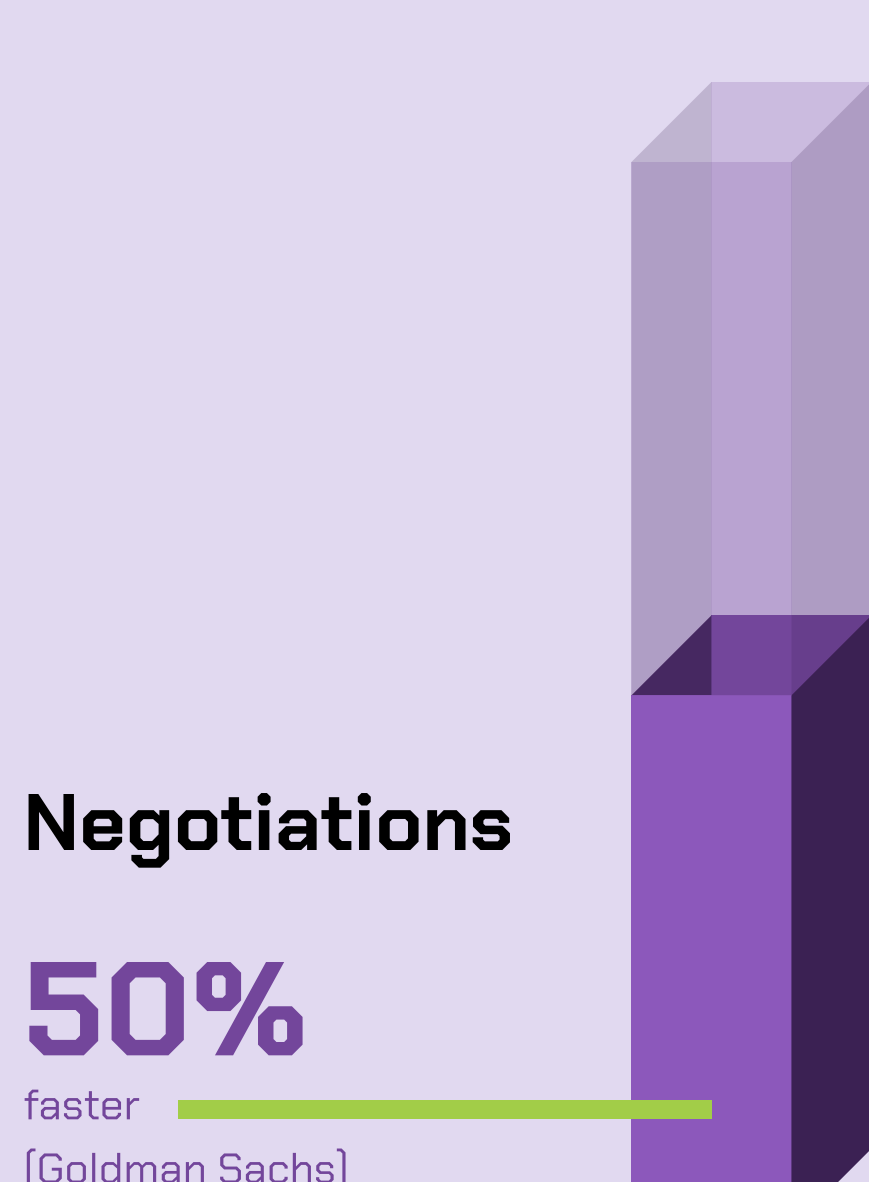

Technology is becoming a
trusted partner instead of
a feared competitor

Contract automation in numbers

In 2021, the use of technology in legal is
a must. But what kind of software
should you use?

The following comparison shows the key
differences between contract
automation software and self-service
contracts.

Impact on revenue

[\[World Commerce and Contracting\]](#)

+9% annual

Contract automation software allows lawyers to make
fewer mistakes and be more productive.

But what if we could make legal even more productive and
create workflows that require zero effort from your
lawyers?

Complete automation for simplest processes

Self-service contracts automate the drafting, filling in, signing,
and delivery of simple documents. How? By delegating them
directly to your clients.

“60% of U.S.-based customers prefer engaging with
automated workflows for simple tasks”

Self-service contracts won't substitute your contract lifecycle
management platform. Instead, they'll power it up by:

speeding up the process of delivering simple contracts
improving customer onboarding experience
managing legal resources efficiently
giving more freedom to legal teams

	Document automation	Self-service contracts
Time to roll out	3 days	Up to 2 weeks
