

Equipment Maintenance Made Easier

Equipment Maintenance Made Easier

Innomaint is a cloud-based equipment maintenance management system that organizes, tracks and schedules your maintenance activities from anywhere, at any time through web and mobile applications.

Flexibility

Innomaint is built to manage the preventive maintenance for any equipments or assets across any industries.

Adaptability

Innomaint system can be configured to the way you want to work without changing your existing maintenance process and gives better results.

User Friendly

You need not to be a tech expert to use Innomaint application, it is designed to make user experience simple and easy.

Cost Effective

Unlimited users access and Innomaint's pricing model offer you guaranteed to deliver a faster ROI.

KEY FEATURES

Asset Management

Define the asset details and store in one place to improve efficiency by providing Engineers/Operators quick access to asset specifications, manuals and other key product information.

Safety Compliance

Innomaint helps regulatory compliance professionals ensure that maintenance standards for workforce, worksite and equipment are established and followed.

SLA for Incidents & Schedules

SLAs are to ensure high standards of maintenance and service team to ensure that the required service levels are met for the service requests or preventive maintenance.

Reminder & Escalation

You can set up reminders and escalations to alert stakeholders and workflow owners to ensure that their operational and maintenance flow are processed on-time.

Dashboard & Reports

Innomaint's powerful Dashboard and Reports will help the decision makers to increase the performance of the equipment and workforce.

Maintenance Management

Preventive maintenance (PM) is a key factor for improving the performance of your equipment and effective ticket management module helps to speed up the process of fixing the incidents.

Contract Compliance

Innomaint's contract compliance management is a key component that brings together operational efficiency of worksite, workforce compliance which reduces the operational risks.

Progressive Self-Diagnosis

Self-diagnosis module facilitate the equipment/asset user to troubleshoot the problem before requesting for service request.

Solution Bank

Pre-defined solution bank will assist the service engineers to identify what solution was given for any incident from the historical data.

Mobile Application

Our mobile Innomaint application gives you complete access to all the assets or equipments details that you need from your favourite mobile device.
