

# Relational Junction for Oracle

Relational Junction is Oracle Cloud certified and is recognized by Oracle as a ground-breaking solution that supports critical data management and analytics use cases.

## Maximize the Power of Oracle Cloud

Moving data to the cloud can be challenging and can take weeks or months to achieve. Sesame Software's data management suite, Relational Junction, integrates with Oracle Cloud in just minutes. Relational Junction enables you to replicate and integrate your business data with Oracle Applications, as well as other data sources.

### Multi-Threaded Data Movement

Get a fully automated data warehouse and start replicating and moving data in minutes. Patented multi-threaded technology moves data at the fastest possible speed while automated data syncs keep data fresh for accurate business insights with no downtime.

### High-Volume Data Connectors

Enable rapid data pipelines for high-volume data movement. With just a simple click-and-load deployment, Relational Junction centralizes data from different sources, providing a 360-degree view for advanced reporting and analytics.

## A Unique Approach to Data Replication

Relational Junction's unique data replication method surpasses the ability of standard marketplace ETL (Extract, Transform, Load) and ELT (Extract, Load, Transform) products to streamline and automate data migration and integration.

Relational Junction replicates the data by programmatically recreating the structure directly from the source system. With Relational Junction, you can bypass hours of costly work in data mapping and modeling. Using automated data replication syncs, data is always fresh and accurate and eliminates the need for maintenance projects. Relational Junction dramatically reduces upfront costs for organizations, fast-tracking time to production, with savings growing year after year.

## Key Features

 <p>High-volume data connectors enable rapid connection to Oracle Applications and other data sources</p>	 <p>Patented multi-threaded technology ensures the fastest possible data movement</p>
 <p>Replicates data to a fully automated data warehouse for backup, compliance, and business intelligence</p>	 <p>Lowers total cost of ownership by eliminating data modeling, database design, and data mapping - just click and load</p>
 <p>Enables intelligent automation, with high-volume data processing in near real-time</p>	 <p>Rapid deployment shortens your time to production - get data moving in minutes, not months!</p>

## About Sesame Software

Sesame Software is the Enterprise Data Management leader, delivering data rapidly for enhanced reporting and analytics. Sesame Software's data platform offers superior solutions for data warehousing, integration, as well as backup, and compliance to fit your business needs. Quickly connect to SaaS, on-premise, and cloud applications for accelerated insights. Learn more today!
